Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3
1 2 3
4 5 6
7 8 9
Output: Sum of the main diagonal: 15
Sum of the secondary diagonal: 15

Answer

```java
// You are using Java
import java.util.*;
public class Main{
  public static void main(String[] args){
    Scanner sc = new Scanner(System.in);
    int n = sc.nextInt();
    int m=0;
    int s=0;
    int[][] p = new int[n][n];
    for(int i =0; i<n; i++){
      for(int j=0; j<n; j++){
        p[i][j]=sc.nextInt();
      }
    }
    for(int i=0; i<n; i++){
      for(int j=0; j<n; j++){
        if(i==j){
          m+=p[i][j];
```

```java
                }
            }
        }
        for(int i=0; i<n; i++){
            for(int j=0; j<n; j++){
                if(i==(n-j-1)){
                    s+=p[i][j];
                }
            }
        }
        System.out.printf("Sum of the main diagonal: %d\nSum of the secondary diagonal: %d",m,s);
    }
}
```

Status : Correct   **Marks : 10/10**
